

## Amnesia

A future of the art  
could be the deontological regression to image  
that gives an access  
to a former spirituality of aboriginals habits  
the common advise  
that plays with the existential immunity  
to the same civilized area  
gathering voluntarism  
of an inside of the west culture  
with its outside  
the dream of an earth surrounded by waters  
the specific landscape feature  
that could be the representative exponent  
of a continental scheme  
suggesting the pregnancy chain of reality  
as a dead steep of the artwork  
and exulting the transfer of the object of desire  
onto the separate mood of an individual schizophrenia  
using pathological and depressive levels  
to rise out from the fatal destiny  
of an inscribed language  
that exhausts the writing thought  
making it a nature of rebirth  
that follows the astrological difference  
between cancer and scorpion

instead of the transgression  
for a fatherhood and celestial coupling  
with the personal entertainment  
to an amnesia of the anthropological world.
