

## Westminster treasure

An access to the Westminster sanctuary , and to men who had served the Briton crown all along reigns , could be the national treasure of a west Mediterranean civilization and its experience , forwarded through the eighteen century by the former print of an Italian humanism , that makes England the key of a global law of citizen rights , being the opportunity to approach its current mood , and open an evolutive heritage of epic contexts ,by the relationship of a registered way of communication with a progressive and social behaviour , both for an individual and neoplatonic attitude to the cultural person and for the one of the past , a preserved acknowledgment to the contemporary view of its anticipated initiative , for a gathering and glorious debt to the reality, providing by the daily fact to its expectative value , a before and an after its holy belief, into celebrations and anthropological rites that brings closer men to the creation.
